

Where the flyers go — and where they've been.

Every neighborhood is listed once. Tick it when it's covered, jot the date and counts, and you'll never double-drop a street by accident — plus you'll learn which neighborhoods actually pay you back.

GOLDEN RULE
A house with rooftop solar = a warm **pigeon-proofing + solar** lead. That's 58% of your revenue — target the panels you can see from the curb.

BEST TIMING
55+ & lake/golf areas: **mid-morning weekdays** — people are home and read the door. Leave 5–10 extra where you just worked.

Read your own results after 2–3 weeks: whichever neighborhoods show the most callbacks per 100 flyers, that's where the next batch goes — double down there and drop the dead ones. Your tracker becomes your ad-spend guide.

Neighborhood picks are local-market judgment for the High Desert (San Bernardino County) tuned to your services — you know the streets, so overrule me where one runs younger or more rental than expected. Not affiliated with any HOA or community listed.
